**BrachySciences Launches Website Dedicated to Brachytherapy  
[brachysciences.com](http://brachysciences.com)**

*New website provides physicians with product information and services for the treatment of prostate cancer. Website launch reinforces company commitment to prostate brachytherapy.*

BrachySciences, a global leader in research and development of Prostate Brachytherapy products, has just launched *BrachySciences.com*, a new web site that provides physicians with up-to-date information on brachytherapy products and services. In addition, *BrachySciences.com* includes a dedicated patient section that provides educational information regarding prostate cancer as well as various treatment options.

“As part of our commitment to the prostate brachytherapy community, we recognize the importance of providing immediate access to information regarding our product portfolio and services,” said Jim Matons, president of BrachySciences. “*BrachySciences.com* also provides a reliable source of information for patients and their families searching for answers regarding prostate cancer and treatment options, as well as clinical data and technical information.”

BrachySciences portfolio of products includes numerous innovative, first to market products such as Vari-Strand™ and SeedLock<sup>3</sup>™ Needles. “Our team is dedicated to product innovation, customer focus and quality excellence,” says Matons. “This year we will introduce new products to the market that will advance the way physicians perform prostate brachytherapy procedures.”

Brachytherapy is a minimally invasive procedure that involves the use of radioactive seeds the size of rice grains. Brachytherapy, an out-patient procedure, usually lasts 45 minutes to an hour. Patients can return to their normal activities within days. The success rates of prostate brachytherapy have been compared with success rates of radical prostatectomy and external beam radiation. In comparison studies, prostate brachytherapy has shown to have a favorable side effect profile when compared with other modalities. Prostate brachytherapy has a very high cure rate for appropriately selected patients.

BrachySciences is a newly formed organization that is dedicated to improving and expanding the use of brachytherapy implants for the treatment of early stage prostate cancer. BrachySciences develops markets, sells and distributes radioactive seeds as well as unique delivery systems and ancillary equipment used in brachytherapy implants. BrachySciences is committed to optimizing the quality and efficiency of prostate brachytherapy implants by providing state of the art, quality brachytherapy products, innovative technologies and services to the physicians and institutions that treat patients diagnosed with prostate cancer.

For complete indications and product information described above, contact BrachySciences at 866.314.8146.
